AB A one step titanium-induced zipper reaction results in an amazing and unprecedented chemo- and regioselectivity in the reductive cyclization of polycarbonyl compds. Thus, polycarbonyl compound I was treated with TiCl_3 and zinc dust under argon to give 80% biindole derivative II.

AB A series of macrocyclic tris(indolylmethylene) compds., e.g. I [R = (un)substituted Ph], can be obtained from 7- or 2-(hydroxymethyl)indoles or from the combination of either an indole with a bis(hydroxymethyl)-2,7'-diindolylmethane or a bis(hydroxymethyl)indole with a 2,7'-diindolylmethane; an isomeric series can be obtained from the combination of an indole with a bis(hydroxymethyl)-2,2'-diindolylmethane.

* STRUCTURE DIAGRAM TOO LARGE FOR DISPLAY - AVAILABLE VIA OFFLINE PRINT *

AB Me substituted bisindolylcarbenium ions I and II (R = H, Me) react with
 some O- and C-nucleophiles regioselectively. The cations II yield with
 hydroxide ions the tetraindolyldimethyl ether III and with methoxide ions
 the bisindolylmethoxymethanes IV. I and II react with several
 methylindoles to give isomeric bis- and trisindolylmethanes. An
 electrophilic reactivity order of cations I and II can be derived from the
 exptl. results.

GI For diagram(s), see printed CA Issue.

AB The reaction of 3-alkylindoles (I) with S₂Cl₂ in ether gave the corresponding 2-diindolyl disulfides (II, n = 2) as the main product, and mono- and trisulfides (I, n = 1,3) as minor products. The similar reaction of 3-arylindoles gave the disulfides in good yields. Reduction of the diindolyl disulfides with NaBH₄ in EtOH afforded the 2-indolinethiones (III) in good yields.

 ACCESSION NUMBER: 1972:405277 CAPLUS
 DOCUMENT NUMBER: 77:5277
 TITLE: Light-induced reactions of α -(N-alkylanilino) ketones. Formation of diindolylmethanes
 AUTHOR(S): Hill, J.; Townend, J.
 CORPORATE SOURCE: Dep. Chem., Univ. Salford, Salford, UK
 SOURCE: Journal of the Chemical Society, Perkin Transactions 1: Organic and Bio-Organic Chemistry (1972-1999) (1972), (9-10), 1210-19
 CODEN: JCPRB4; ISSN: 0300-922X
 DOCUMENT TYPE: Journal
 LANGUAGE: English
 AB Irradiation of 6 α -(N-alkylanilino) ketones, $\text{PhN}(\text{CH}_2\text{R})\text{CHR}_1\text{COMe}$ (I; R, R_1 = H, Me, or Ph), in MeOH, Me_2CHOH , or benzene caused fission of the α C-N bond giving a secondary amine (PhNHCH_2R), a ketone ($\text{R}_1\text{CH}_2\text{COMe}$), an α -[p-(alkylamino)phenyl] ketone formed by para rearrangement, and a substituted 2-methylindole formed by ortho rearrangement with subsequent cyclodehydration. I (R_1 = H) also gave a diindol-3-ylmethane derived from the 2-methylindole. Irradiation of I with 1,2-dimethylindole gave diindolylmethanes, via 1-phenylazetidinols as labile intermediates. Irradiation of 7 anilino ketones $\text{PhNRCH}_2\text{COR}_1$ (R = H, Me, or Me_3C ; R_1 = Me, Et, Me_3C , or Ph) was also studied.
